

VULCANOPOLI

RULES

The game consists of a board divided into 26 squares:

- 1 Start box
- 4 Italian active volcanoes boxes
- 4 Curiosities boxes
- 4 Chance boxes
- 1 Viewpoint box
- 1 Underpass box
- 1 Passage box
- 1 Hot springs box
- 1 Geothermal energy box
- 1 Magma chamber box
- 17 Cities boxes

Moreover there are:

18 CURIOSITIES cards, 18 CHANCE card, 17 CITIES cards and 4 VOLCANO cards.

The aim of the game is to finish the round before the other participants collecting as many city cards as possible. It can be played with 2 or more participants. All players start from START box. In their turn, each team/players must roll the numbered die and advance by the number of boxes indicated on the die.

Depending on the box the team/players reach, different actions will correspond:

- By stopping on the curiosities and chance boxes, a corresponding card must be drawn. The cards, present in the center of the billboard, are divided into two categories of curiosities and chance categories. The former describe, in broad terms, the theories on volcanology over time and the latter ask questions about volcanology. The curiosities cards that contain the illustration of a historical epoch describe the peculiar events of the epoch and the other can make the team/players move from one box to another on the billboard. Chance cards present questions. If the team/players answer correctly, they can advance 1 box. If the team/players do not answer correctly, the opposing team can answer and advance one box.
- The underpass box takes team/players back to the start
- The passage box leads to the first chance box encountered while advancing
- Stopping for the first time on a city box the team/players gains the corresponding city. If the opposing team/players land on a city card already in another player's possession, they must ask a question relating to the information corresponding to that city and if the opponent answers correctly they can win the card. Otherwise the card remains with the first player.
- Stopping for the first time on a volcano box the team/players gains the corresponding card. This card is worth three times the city card.
